## Pulse Shaping

Time and frequency representation of the following signals: - Rectangular pulse. - Sinc. - Rised cosine. - Square root rised cosine (for Rx and Tx).

```
clc; clear; close all;
```

## Parameters

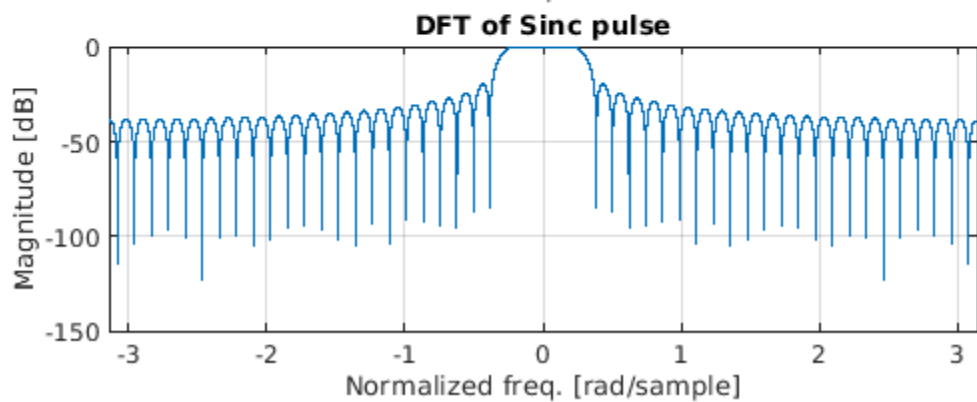

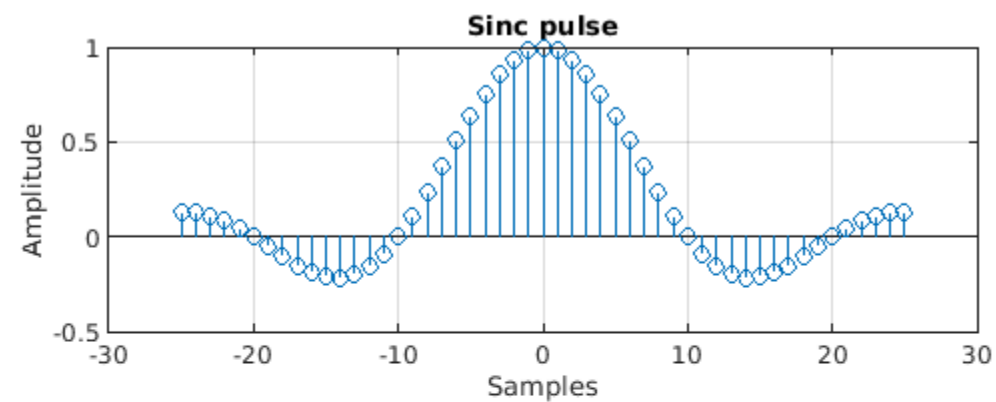

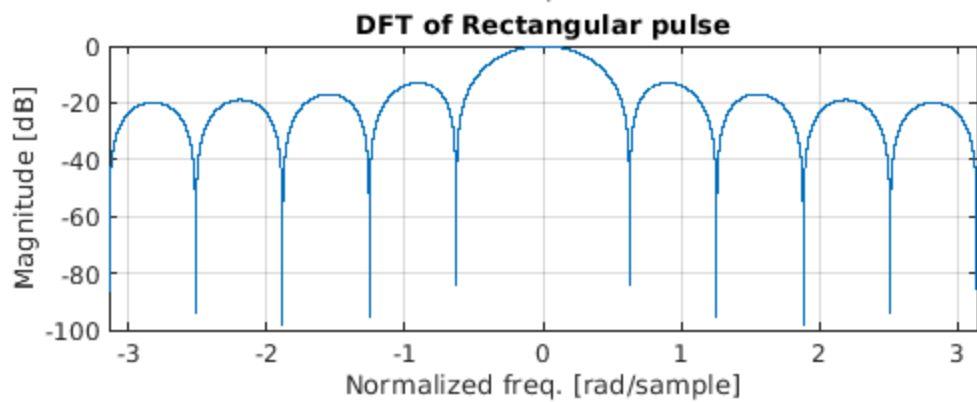

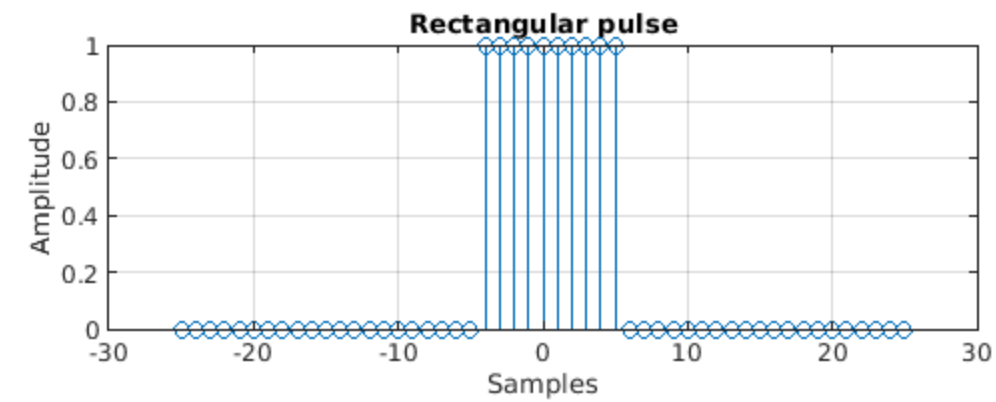

```
nTaps = 50;           % Taps for FIR filters
L = 10;               % Oversampling factor
alpha = 0.5;          % Alpha constant for raised cosine (0 < alpha < 1)
beta = 0.5;           % Beta constant for srrc (0 < beta < 1)
```

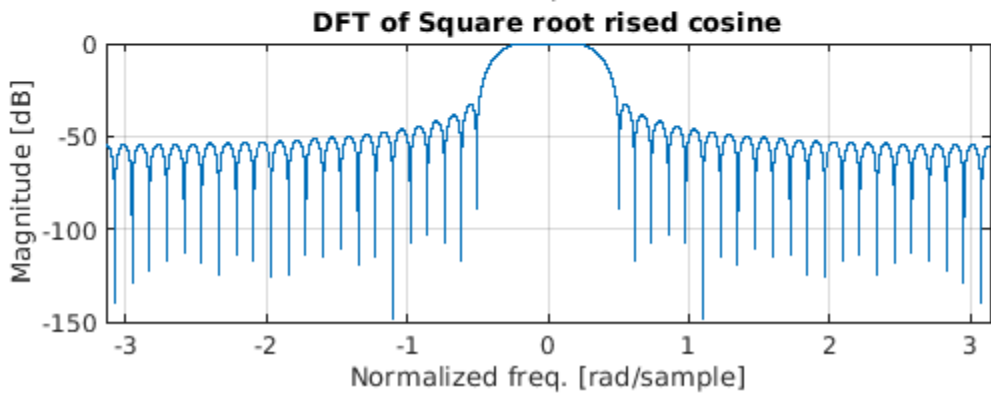

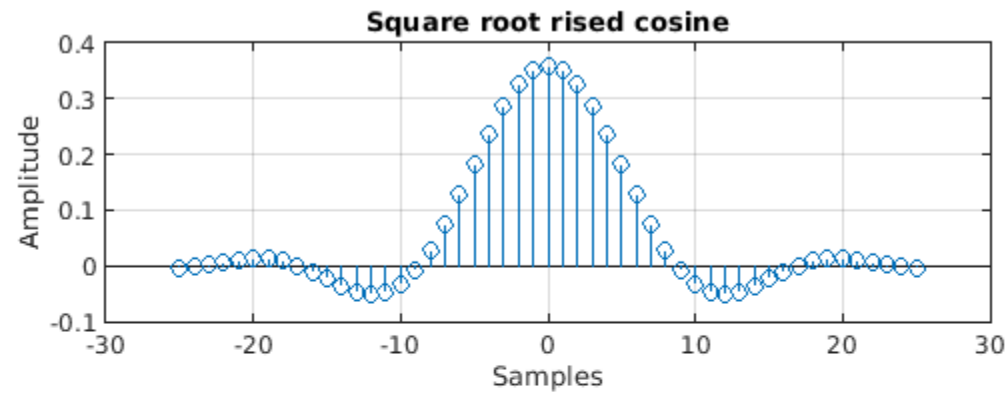

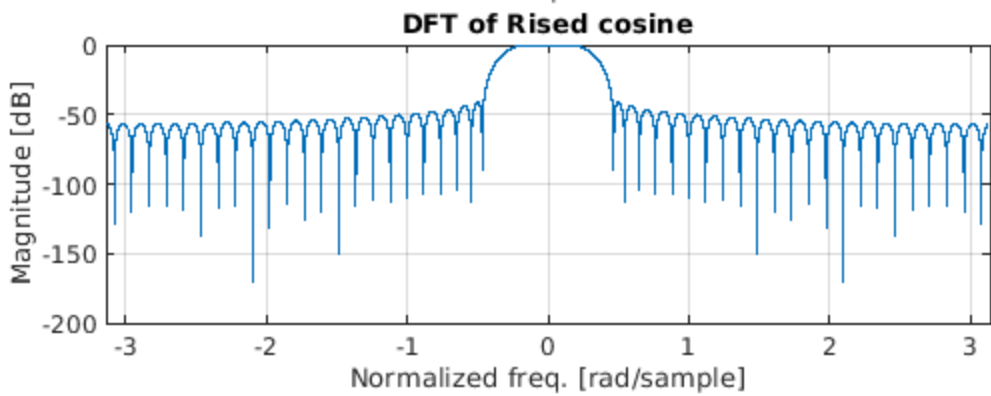

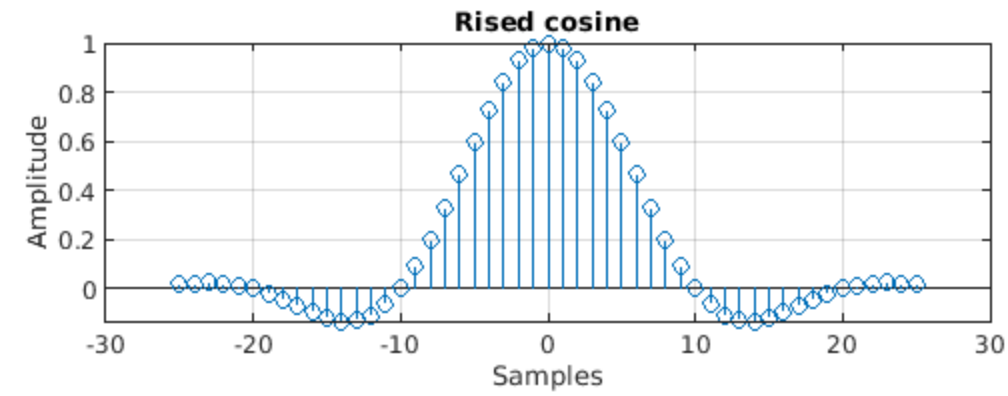

## FIR filters

```
rect = Modulator.rect_pulse(L, nTaps);
sinc_p = Modulator.sinc_pulse(L, nTaps);
rc = Modulator.rc_pulse(alpha, L, nTaps);

srrc = Modulator.srrc_pulse(beta, L, nTaps);
%srrc = conv(srrc, srrc, "same"); % Apply two filters, Rx and Tx.

Scope.plot_fir_filter(rect, Title="Rectangular pulse");
Scope.plot_fir_filter(sinc_p, Title="Sinc pulse");
Scope.plot_fir_filter(rc, Title="Rised cosine");
Scope.plot_fir_filter(srrc, Title="Square root rised cosine");
```
